Workato Enterprise MCP

Turn AI insights into enterprise actions.

DISCOVER · ACCESS · ACT · GOVERN

Workato's Enterprise Model Context Protocol (MCP) is the universal interface between AI agents and enterprise systems. Built on open standards and backed by enterprise-grade governance, MCP makes it easy for AI to securely discover, execute, and orchestrate business capabilities—no matter where they live. Unlock automation, insight, and action through intelligent agents that can safely execute real work across your tech stack.

MCP Enablement & Abstraction
Expose existing APIs, orchestrations, and system actions as MCP-compatible tools with zero rework. Whether you're connecting ERP, CRM, or custom apps, Workato abstracts the complexity—turning enterprise logic into AI-accessible capabilities. Support both structured and unstructured input and surface it all through a unified agent interface.

AI-Ready Services
Turn Workato Recipes into reusable, AI-callable services via MCP. Genies, our AI agents, can act as both MCP clients and servers—paving the way for agent-to-agent orchestration. Define, test, and refine behavior using enterprise context, prompt engineering best practices, and rich observability into agent actions.

Limitless Interoperability
Support any MCP-compatible AI tool—Claude, Cursor, Windsurf, and more—without custom integrations. Use Workato's 1,200+ prebuilt connectors or universal HTTP/SDK tools to integrate any internal or external system. Let agents work seamlessly across SaaS apps, on-prem systems, and third-party platforms.

Action-Oriented Intelligence
Go beyond insights—enable AI agents to trigger workflows, update records, send communications, and make real-time decisions. Securely embed AI actions into your business with full auditing, access control, and user authentication across tools and environments.

Enterprise-Grade Security and Governance
Scale AI usage safely with Workato's enterprise-grade access policies, identity-aware routing, and full observability. Handle millions of tool invocations with high performance and reliability. Workato Enterprise MCP is built to meet the governance, security, and compliance standards required by modern IT.
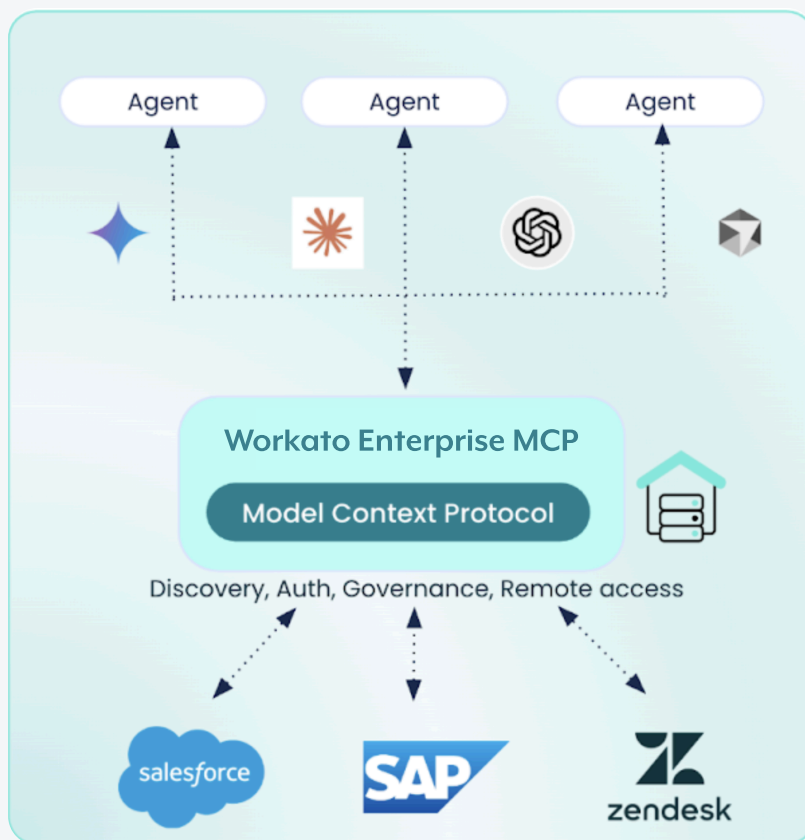

Cloud-Native and DevOps-Free
Get started in minutes without managing infrastructure. Workato handles identity, access, hosting, and environment management—giving teams a no-code path to AI integration. Focus on what matters: enabling agents, not maintaining pipelines.
